Handbook of Research on Writing

History, Society, School, Individual, Text

Edited by

Charles Bazerman, *University of California at Santa Barbara*

The *Handbook of Research on Writing* ventures to sum up inquiry over the last few decades on what we know about writing and the many ways we know it: How do people write? How do they learn to write and develop as writers? Under what conditions and for what purposes do people write? What resources and technologies do we use to write? How did our current forms and practices of writing

emerge within social history? What impacts has writing had on society and the individual? What does it mean to be and to learn to be an active participant in contemporary systems of meaning?

This cornerstone volume advances the field by aggregating the broad ranging, interdisciplinary, multidimensional strands of writing research and bringing them together into a common intellectual space. Endeavoring to synthesize what has been learned about writing in all nations in recent decades, it reflects a wide scope of international research activity, with attention to writing at all levels of schooling and in all life situations. Chapter authors, all eminent researchers, come from disciplines as diverse as anthropology, archeology, typography, communication studies, linguistics, journalism, sociology, rhetoric, composition, law, medicine, education, history, and literacy studies. The *Handbook's* 37 chapters are organized in five sections: The History of Writing; Writing in Society; Writing in Schooling; Writing and the Individual; and Writing as Text.

This volume, in summing up what is known about writing, deepens our experience and appreciation of writing—in ways that will make teachers better at teaching writing and all of its readers better as individual writers. It will be interesting and useful to scholars and researchers of writing, to anyone who teaches writing in any context at any level, and to all those who are just curious about writing.
